ULTRASOUND REPORT

Upper Abdomen Ultrasound

The liver is normal in size. Its border is smooth. The parenchymal echopattern is homogenous with diffuse increase in echogenicity save for a hypoechoic focus in the pericholecystic region. No solid nor fluid-filled mass seen. The intrahepatic ducts and veins are not dilated. The common bile duct is normal in caliber (0.4 cm).

The gallbladder measures 7.4 x 2.0 cm which is within normal. The lumen is echofree showing no definite evidence of stone nor mass. The wall is smooth and not thickened.

The pancreas and spleen are normal in size and echogenicity. No discrete mass nor inflammatory changes noted. Pancreatic head, body and tail measure 1.7, 0.5 and 1.3 cm., respectively.

IMPRESSION

Normal sized liver with diffuse fatty infiltration and pericholecystic sparing
Normal sonogram of the gallbladder, biliary tree, pancreas and spleen.
