## ULTRASOUND REPORT

### Soft Tissue Ultrasound (LEFT PARIETAL SCALP)

Focused scanning of the polypoid lesion in the left parietal scalp shows a complex structure in the cutaneous/subcutaneous layer measuring 1.4 x 0.8 cm. There is increased vascularity in what appears to be the stalk of the lesion. This lesion may represent a hemangioma.

### IMPRESSION

Focused scanning of the polypoid lesion in the left parietal scalp shows a complex structure in the cutaneous/subcutaneous layer measuring 1.4 x 0.8 cm. There is increased vascularity in what appears to be the stalk of the lesion. This lesion may represent a hemangioma.
