ULTRASOUND REPORT

Hepato Biliary Tree Ultrasound

The liver is normal in size. Its border is smooth. The parenchymal echopattern is homogenous with normal echogenicity. No solid nor fluid-filled mass seen. The intrahepatic ducts and veins are not dilated.

The gallbladder measures 5.8 x 1.6 cm which is within normal. There is a shadowing, mobile echo measuring 1.1 cm. The wall is smooth and not thickened. The common bile duct is normal in caliber (0.2 cm).

The pancreas is normal in size and echogenicity. No discrete mass nor inflammatory changes noted.

IMPRESSION

Cholelithiasis with no evidence of cholecystitis.
Normal sonogram of the liver, biliary tree and pancreas.
